Gary Weinberger, MD, FACS today announced that Paphos Skincare of Ft Lauderdale, FL has finished formulating and the testing of the only 100% Biologically Pure Lycopene Cream in the World. The Cream is manufactured in Italy and sold worldwide by Paphos Skincare.

Ft. Lauderdale, FL (PRWEB) February 2, 2009 -- Gary Weinberger, MD, FACS today announced that Paphos Skincare of Ft Lauderdale, FL has finished formulating and the testing of the only 100% Biologically Pure Lycopene Cream in the World. The Cream is manufactured in Italy and sold worldwide by Paphos Skincare.

This luxurious, rapidly absorbed hydrating and renewing cream is rich in lycopene and natural botanical oils. Lycopene is the most powerful antioxidant known today and is found in tomatoes. Antioxidants protect the body from the harmful oxidizing effect of the environment. The damage caused by environmental pollutants and UV radiation are responsible for photo-aging of the skin and certain skin cancers.

Paphos Skincare extracts the lycopene used in its Renewing Lycopene Skin Cream from organic tomatoes from southern Italy and then encapsulates it in a cerosome delivery system. The lycopene and natural botanicals used in Paphos Skincare's products use a patented solvent-free and environmentally friendly "green" extraction process called Super Critical CO2 Fluid Extraction.

Paphos' cerosome delivery system speeds up the transcutaneous absorption of the lycopene. As lycopene is released, the glycoprotein envelope acts as filler, binding water molecules deep in the dermis. This action plumps the skin, reducing fine lines and wrinkles.

A clinical study conducted by the University of Siena shows that natural lycopene has almost twice the ability to inhibit tumor cell growth than synthetic lycopene. As lycopene is released, the cerosome envelope acts as a filler, binding water molecules deep in the dermis which plumps the skin & reduces fine lines and wrinkles. Renewing Lycopene Skin Cream has an SPF 16 protecting the skin from the burning and irritating effects of UVB radiation, as well as UVA protection of five stars. Paphos' Renewing Lycopene Skin Cream filters 91.62% of UVA radiation; responsible for sun damage, wrinkles, and hyperpigmentation.

This cream contains a new formula of hyaluronic acid which results in a long lasting, rapidly absorbed cream that noticeably improves skin tone when used daily. The addition of Acemella oleracea flower extract reduces fine lines and wrinkles through its natural muscle relaxing action. Renewing Lycopene Skin Cream is paraben and preservative free with a delicate fragrance of natural Sicilian orange flowers and Mediterranean jasmine.
