## Johnny Depp- Ever Looking fantastic

Contributed by Christine Toner

This year Johnny Depp returns as the insatiable Jack Sparrow in the third of the Pirates of the Caribbean movies, much to the delight of women everywhere. The sexy star of Edward Scissorhands may have aged a bit since he played the odd outcast befriended by Winona Ryder but according to our experts the 43 year old star is still looking fantastic.

Fashion Journalist Louise Gerrard says "Johnny is absolutely beautiful. Vanessa Paradis is one lucky woman! And the best thing is, he just gets better with age. He has always had the little something extra but lately he's looking better than ever. It's as if he has now grown into his looks.

"Johnny never looks old, fashion wise, because he has such a fantastic quirky style. He dresses the way he wants and it's always fresh and different and exclusive to him. Having this eccentric style as opposed to dressing in a conservative, run of the mill way makes him stand out in the crowd and makes it difficult to pigeon hole him into an age group."

Cosmetic surgeon Dr Richard Halton says "Johnny has wonderful bone structure and he's very slim which means the skin on his face isn't sagging - a common sign of old age. His features are very strong and his eyes stand out. For his age Johnny's skin is in good condition. I would not say he has received any kind of cosmetic assistance."

Johnny gets a 10 on 10 on the GRINZA scale - "the man is pure beauty through and through and no amount of aging can affect that!"
